

## Js sample exam

Question 1 :

1-

The event loop

JavaScript has a runtime model based on an **event loop**, which is responsible for executing the code, collecting and processing events, and executing queued sub-tasks. This model is quite different from models in other languages like C and Java.

2-

- unshift/push - add an element to the beginning/end of an array
- shift/pop - remove and return the first/last element of an array

Question2 :

What is The Output ?

1) 3

2) 0

1

2

3

4

3) ['baz']

4) 1

Hello

True

5) true

['carName', 'Bmw']

['carPrice', 1000000]
